EDUCATION

Carleton University

Bachelor of Computer Science (10.19/12 CGPA)

Ottawa, ON

Sep 2021 – May 2026

TECHNICAL SKILLS

AI/ML & Data Science | Generative AI, Multimodal AI, Computer Vision, LLMs, RAG, Prompt Engineering, Vector Databases (ChromaDB), LangChain, Ollama, Python, Pandas, NumPy

Languages | Python, TypeScript, Java, SQL (Postgres), NoSQL (MongoDB), JavaScript, C/C++, HTML/CSS

Web Frameworks | Next.js, React, FastAPI, Spring Boot, Node.js, Express.js, Django, Flask, Streamlit

Cloud & DevOps | AWS (ECS Fargate, SQS, DynamoDB, CloudFront), Terraform, Azure, Git, Docker, Kubernetes, Linux, Bash

EXPERIENCE

Software Engineer (Part-Time, previously Full-Time Co-op)

Jan 2025 – Present

CGI Ottawa, ON

- Handled full-stack development and deployment lifecycle of a critical payment processing application (Java Spring Boot, AWS), collaborating with the cloud team to manage the end-to-end transition for Government of Canada stakeholders.
- Revamped member registration workflows by implementing secure file handling and ServiceNow integration, eliminating manual email exchanges and reducing ticket resolution time.
- Developed ad-hoc automation scripts in Python to resolve immediate team bottlenecks, eliminating repetitive manual overhead in daily work and data management.
- Engineered an automated reporting pipeline using Python (Pandas) and SQL, replacing manual Excel workflows to reduce generation time from hours to minutes while eliminating human error.

Business Intelligence & Operations Co-op

Sep 2023 – Dec 2023

Royal Canadian Mint Ottawa, ON

- Automated business intelligence workflows by developing Python scripts to process 62,000+ data points, significantly reducing manual data entry time and increasing reporting accuracy.
- Engineered automated data collection pipelines to replace manual aggregation, removing data entry bottlenecks and ensuring consistent delivery of operational metrics.

Founder & Full Stack Developer

June 2020 – July 2022

LeagueKingdom Toronto, ON

- Built and scaled a full-stack e-commerce marketplace from scratch using the MERN stack (MongoDB, Express.js, React, Node.js), handling user authentication, inventory management, and transactions
- Managed backend infrastructure on Linux VMs, writing Bash automation scripts to streamline inventory management and order fulfillment.
- Managed end-to-end product lifecycle, from feature roadmap planning and UI/UX design to deployment and technical customer support.

PROJECTS

PhotogenAI | Next.js, TypeScript, FastAPI, Python, AWS (Terraform)

Nov 2025

- Built a production multimodal AI SaaS turning casual product photos into studio-quality creatives in under 60 seconds using Google Gemini 2.5 Flash.
- Architected an event-driven microservices system on AWS (ECS Fargate, SQS, DynamoDB) with full Terraform IaC, achieving zero-downtime horizontal scaling.
- Designed advanced vision + text-to-image pipeline with in-painting techniques guaranteeing subject preservation across angles and lighting.
- Implemented enterprise safeguards: per-second billing, rate limiting, and 24-hour data ephemerality.

Auto Assistant 360 | Python, OpenAI Agent SDK, PostgreSQL

Apr 2025 – May 2025

- Developed an autonomous AI support agent using Python and OpenAI's Agent SDK during an internal hackathon at CGI, automating email support ticket resolution.
- Engineered a GPT-4o powered agent capable of intent classification, tool selection, and autonomous task execution to resolve queries without human intervention.
- Designed an email parsing pipeline triggering conditional logic workflows, reducing manual triage time.

GenAI Document Q&A | Python, LangChain, Ollama, RAG

Feb 2025

- Developed a local RAG system utilizing LangChain and Ollama to enable natural language querying of PDF documents.
- Implemented a vector search pipeline using ChromaDB and SentenceTransformers for high-accuracy semantic retrieval.
- Engineered prompt templates to strictly bound the LLM's responses to retrieved context, mitigating hallucinations.
